

BETH Oil-Mist Electrostatic Precipitator

BETH® Oil-Mist Electrostatic Precipitator Filters have a similar structure as the wet-electric filters. They mostly run without a rinse and fog water zone.

Suitable for air volume flows from 8,830 CFM to 117,715 CFM (from 15,000 m³/h to 200,000 m³/h).

If necessary including CO₂-fire extinguishing system, fire damper, pipeline and fan.

Due to the low-maintenance operation it is a cheap alternative to decentralized filter systems.
